Summary

Senior Java Engineer with 25+ years of software engineering experience in enterprise backend systems, distributed applications, fintech integrations, government reporting platforms, and real-time data processing. Strong hands-on Java background across Java 1.5–21, Spring, Spring Boot, JPA, JDBC, REST APIs, SQL, messaging, CI/CD, and database performance tuning. Experienced in leading technical design while still contributing production code, reviews, debugging, and delivery. PhD in Management Information Systems (EQF Level 8, recognized in Romania).

Core Skills

- Java backend engineering, application architecture, and technical leadership
- Spring, Spring Boot, J2EE, REST/JSON services, SOAP integrations
- Distributed systems, messaging, event-driven processing, and high-load services
- Database design, SQL optimization, PostgreSQL, Oracle, MySQL, MSSQL, Firebird
- JPA, JDBC, QueryDSL, JOOQ, data access layer design
- CI/CD, automated testing, code reviews, debugging, and production support
- Requirements analysis, domain modelling, SDLC, Agile/Scrum delivery
- Payment systems, POS terminal software, fintech and banking integrations

Technologies

Java 1.5–21, Spring, Spring Boot, Quarkus, J2EE, REST, JSON, SOAP, PostgreSQL, Oracle, MySQL, MSSQL, Firebird, Kafka, RabbitMQ, Redis, AWS, Docker, Podman, JPA, JDBC, QueryDSL, JOOQ, JUnit, TestNG, JMeter, Gatling, Maven, Gradle, Ant, Git, Linux, Bash, JavaPOS, NDC, JNI, JNDI

Selected Achievements

- Built and maintained Java-based enterprise systems across fintech, banking, automotive, government, and defense domains
- Architected real-time UAV threat intelligence platform with sub-second processing latency for high-throughput sensor data
- Reduced infrastructure costs by approx. 20% through cloud and software optimization on AWS
- Reduced deployment time by approx. 40% through CI/CD automation and release process improvements
- Designed telecom reporting platform that reduced manual data entry by approx. 80% and improved accuracy by approx. 70%
- Delivered integrations between banking systems, payment providers, POS terminals, and REST-based backend services

Experience

Solution Architect / Senior Java Engineer
Anti-UAV Defense System (Confidential)

Nov 2024 – Present

- Designed and implemented backend architecture for a real-time UAV threat intelligence platform

- Built scalable services for high-throughput sensor data and RF fingerprinting workflows
- Optimized data processing layers to remove latency bottlenecks in real-time detection flows
- Established CI/CD pipelines, coding standards, and technical delivery practices
- Worked across Java, JavaScript, PostgreSQL, hardware integration, and RF data processing

Solution Architect / Senior Java Engineer

Feb 2017 – Present

Finik.PRO Ltd, Kyiv, Ukraine (Fintech / Banking)

- Designed and delivered Java backend systems for fintech, internet banking, and financial platforms
- Implemented high-availability cloud solutions on AWS using API Gateway, RDS, DynamoDB, SQS, SNS, and related services
- Developed scalable backend services, integrations, monitoring, and deployment pipelines
- Led technical roadmap, coding standards, code reviews, and root-cause analysis across development teams
- Translated business and customer requirements into maintainable Java architecture and production delivery plans

Solution Architect

Feb 2023 – Jun 2025

USAID SOERA

- Conducted IT audits and diagnostic assessments for complex government IT landscapes
- Defined target IT architecture and modernization roadmaps for large-scale digital initiatives
- Designed integration approaches, data flows, and implementation plans for legacy system modernization
- Advised stakeholders on feasibility, governance, and software delivery risks

Software Architect / Senior Java Engineer

Sep 2016 – Jul 2021

National Commission for Communications and Informatization, Kyiv, Ukraine

- Designed and developed a reporting system for telecom and internet providers
- Implemented backend services in Java after MVP validation, with supporting Perl and Vue.js components
- Built architecture for large-scale reporting, data collection, validation, and analytics workflows
- Reduced manual data entry by approx. 80% and improved report accuracy by approx. 70%

Software Architect / Senior Java Engineer

Jan 2014 – Dec 2019

Banking Projects under NDA, Kyiv, Ukraine

- Designed integrations between banks, payment systems, and external service providers
- Developed Java-based POS terminal software from JavaPOS device drivers and NDC protocol implementation to REST APIs and remote application control
- Built cross-system communication architecture for diverse banking hardware and software environments
- Authored technical guidelines and reusable development approaches for faster delivery

Software Architect / Senior Software Engineer

Jan 2006 – Dec 2022

IterCom Ltd

- Designed and developed enterprise systems for automotive, financial, and accounting domains
- Built distributed applications for multi-branch organizations and heterogeneous deployment environments
- Created development guidelines, reusable frameworks, and architecture standards
- Worked on database design, backend development, integration, optimization, and documentation

Software Developer

Jul 1993 – Jan 2006

Bank Mriya

- Developed banking systems across the full software development lifecycle
- Modernized and modularized legacy systems to improve maintainability, performance, and operating cost
- Participated in database development, release planning, testing, and production support

Education

PhD in Management Information Systems

Thesis: Risk management in IT outsourcing

International Open University, Interregional Academy of Personnel Management, Kyiv, Ukraine

MSc in Microelectronics and Semiconductor Devices

Kyiv Polytechnic Institute, Kyiv, Ukraine

Certifications

AWS Cloud Solutions Architect, Coursera / Amazon

IBM AI Engineering Professional Certificate

TOGAF Foundation Enterprise Architect Certification Training

Machine Learning, Coursera / Stanford University

Web Application Architectures, Coursera / University of New Mexico

Functional Programming Principles in Scala, Coursera / EPFL

Algorithms: Design and Analysis, Coursera / Stanford University

Languages

Russian (Native), Ukrainian (C2), English (B2/C1), Romanian (A2)
