Summary

Software Architect with 20+ years of experience in backend and distributed systems. Specializing in scalable backend platforms, real-time processing, and high-load architectures. Experienced in designing production systems from concept to deployment, balancing scalability, performance, and complexity. PhD in Management Information Systems (EQF Level 8, recognized in Romania).

Key Achievements

- Architected real-time UAV detection platform achieving sub-second processing latency for high-throughput sensor data
- Reduced infrastructure costs by 20% through cloud architecture optimization (AWS)
- Decreased deployment time by 40% by introducing CI/CD pipelines and automation
- Designed distributed systems handling real-time data processing and messaging (Kafka, event-driven architectures)
- Reduced manual data processing by 80% and improved data accuracy by 70% in large-scale reporting system
- Built and integrated complex systems across banking, fintech, and government domains
- Delivered full lifecycle architecture: from system design to production deployment and optimization

Core Expertise

- Distributed systems & system design
- Backend architecture (Java)
- High-load & real-time systems
- Messaging & event-driven systems (RabbitMQ, Kafka)
- Database performance & data-intensive systems
- Cloud architectures (AWS)

Technologies

Java · PostgreSQL · Kafka · RabbitMQ · AWS · Docker · REST · JPA · QueryDSL · CI/CD

Experience

Solution Architect

Nov 2024 – Present

Anti-UAV Defense System (Confidential)

- Architected real-time UAV threat detection platform (sub-second latency)
- Designed distributed system for high-throughput sensor data processing
- Built scalable pipelines integrating heterogeneous hardware sources
- Introduced CI/CD pipelines (↓ deployment time 40%)
- Resolved performance bottlenecks in data processing layers

Solution Architect

Feb 2017 – Present

Finik.PRO Ltd (Fintech / Banking)

- Designed distributed backend systems on AWS (API Gateway, RDS, DynamoDB)
- Built scalable financial systems with real-time processing capabilities
- Reduced infrastructure costs by 20% through optimization strategies
- Implemented CI/CD and monitoring systems improving system reliability
- Led architectural decisions across multiple teams

Solution Architect

Feb 2023 – Jun 2025

USAID SOERA

- Conducted IT audits and identified architectural bottlenecks
- Defined target architecture and modernization roadmap
- Designed integration and data flows across systems
- Advised on large-scale digital transformation initiatives

Software Architect / Senior Engineer

Sep 2016 – Jul 2021

National Commission for Communications

- Designed large-scale reporting platform for telecom providers
- Reduced manual data entry by 80% and improved accuracy by 70%
- Built backend systems (Java) and analytics workflows
- Introduced scalable architecture for growing datasets

Software Architect / Senior Engineer

Jan 2014 – Dec 2019

Banking Projects (NDA)

- Designed integrations between banking systems and payment providers
- Built POS terminal software (device layer to backend APIs)
- Developed cross-system communication architectures

Software Architect / Senior Engineer

Jan 2006 – Dec 2022

IterCom Ltd

- Designed enterprise systems for automotive and financial domains
- Built distributed applications for multi-branch organizations
- Developed reusable frameworks and architecture standards

Software Developer

Jul 1993 – Jan 2006

Bank Mriya

- Developed banking systems across full SDLC
- Modernized legacy systems improving performance and maintainability
- Participated in database design and optimization

Education

PhD in Management Information Systems

EQF Level 8 (recognized in Romania as Economic Informatics)

MSc in Microelectronics

Kyiv Polytechnic Institute

Certifications

AWS Cloud Solutions Architect
IBM AI Engineering Professional Certificate
TOGAF Foundation

Languages

Ukrainian (Native), English (B2/C1), Romanian (A2)
